

IN THE CLAIMS

Please amend the claims as follows:

1-15. (Canceled)

16. (Currently Amended) An information-processing apparatus, comprising:  
a networking device that communicates with an external apparatus;  
a storage that stores an album of a plurality of content data and a transfer log  
indicating whether each of the plurality of content data has been transferred to the external  
apparatus; and  
a processing unit configured to identify certain content data from the plurality of  
content data of the album upon a reception of a device ID of the external apparatus from the  
external apparatus and when the transfer log indicates that the certain content data has never  
been transferred to the external apparatus,  
the processing unit further configured to control a display of information about the  
album,  
the processing unit further configured to start a transfer of the certain content data to  
the external apparatus, when the album has been selected and the certain content data has  
never been transferred to the external apparatus, [[and]]  
the processing unit further configured to update the transfer log when the networking  
device transfers the certain content data to the external apparatus.

17. (Currently Amended) The information-processing apparatus according to claim  
16, wherein, when the networking device receives ~~identification information identifying the  
external apparatus~~ the device ID from the external apparatus, the processing unit identifies  
the transfer log based on the ~~identification information~~ device ID.

18. (Previously Presented) The information-processing apparatus according to claim 16, wherein the processing unit is further configured to determine the album including the certain content data.

19. (Canceled)

20. (Previously Presented) The information-processing apparatus according to claim 16, wherein the processing unit is further configured to, upon a selection of the album in response to the display of the information, transfer the certain content data of the album to the external apparatus.

21. (Previously Presented) The information-processing apparatus according to claim 20, wherein the processing unit is further configured to control the display of the information based on the transfer log.

22. (Previously Presented) The information-processing apparatus according to claim 16, wherein the processing unit is further configured to determine albums having only content data that has never been transferred to the external apparatus.

23. (Previously Presented) The information-processing apparatus according to claim 22, wherein the processing unit is further configured to determine the content data to be transferred to the external apparatus based on the transfer log.

24. (Previously Presented) The information-processing apparatus according to claim 16, wherein the processing unit is further configured to cause a display device to display information about albums having only content data that has never been transferred to the external apparatus and, upon a selection of one of the albums in response to the information about the albums, to transfer the content data of the one of the albums to the external apparatus.

25. (Previously Presented) The information-processing apparatus according to claim 24, wherein the processing unit is further configured to cause the display device to display the information about the albums based on the transfer log.

26. (Previously Presented) The information-processing apparatus according to claim 16, wherein the processing unit is further configured to acquire the transfer log from the external apparatus.

27. (Canceled)

28. (Previously Presented) The information-processing apparatus according to claim 16, wherein the certain content data is defined by a song.

29. (Previously Presented) The information-processing apparatus according to claim 16, wherein the networking device transfers the certain content data to the external apparatus based on a determination whether the certain content data has previously been transferred to the external apparatus.

30. (Previously Presented) The information-processing apparatus according to claim 29, wherein the networking device transfers the certain content data to the external apparatus when the determination indicates that the certain content data has not previously been transferred to the external apparatus.

31. (Currently Amended) An information-processing apparatus, comprising:  
networking means for communicating with an external apparatus;  
means for storing an album of a plurality of content data and a transfer log indicating whether each of the plurality of content data has been transferred to the external apparatus;  
and

processing means for identifying certain content data from the plurality of content data of the album upon a reception of a device ID of the external apparatus from the external apparatus and when the transfer log indicates that the certain content data has never been transferred to the external apparatus, [[for]]

the processing means controlling a display of information about the album, [[for]]  
the processing means starting a transfer of the certain content data to the external apparatus, when the album has been selected and the certain content data has never been transferred to the external apparatus, ~~and for~~

the processing means updating the transfer log when the networking means transfers the certain content data to the external apparatus.

32. (Currently Amended) A computer-readable medium encoded with computer executable instructions, wherein the instructions, when executed by a processing unit, cause the processing unit to:

communicate with an external apparatus;

store a transfer log indicating whether each of a plurality of content data of an album has been transferred to the external apparatus;

identify certain content data from the plurality of content data of the album upon a reception of a device ID of the external apparatus from the external apparatus and when the transfer log indicates that the certain content data has never been transferred to the external apparatus;

control a display of information about the album;

start a transfer of the certain content data to the external apparatus, when the album has been selected and the certain content data has never been transferred to the external apparatus; and

update the transfer log in response to a transfer of the certain content data to the external apparatus.

33. (Currently Amended) The computer-readable medium according to claim 32, wherein, upon a reception of ~~identification information identifying the external apparatus~~ the device ID from the external apparatus, the processing unit identifies the transfer log based on the ~~identification information~~ device ID.

34. (Previously Presented) The computer-readable medium according to claim 32, wherein the instructions further cause the processing unit to determine the album including the certain content data.

35. (Canceled)

36. (Previously Presented) The computer-readable medium according to claim 32, wherein the instructions further cause the processing unit to, upon a selection of the album in response to the display of the information, transfer the certain content data of the album to the external apparatus.

37. (Previously Presented) The computer-readable medium according to claim 36, wherein the instructions further cause the processing unit to control the display of the information based on the transfer log.

38. (Previously Presented) The computer-readable medium according to claim 32, wherein the instructions further cause the processing unit to determine albums having only content data that has never been transferred to the external apparatus.

39. (Previously Presented) The computer-readable medium according to claim 38, wherein the instructions further cause the processing unit to determine the content data to be transferred to the external apparatus based on the transfer log.

40. (Previously Presented) The computer-readable medium according to claim 32, wherein the instructions further cause the processing unit to cause a display device to display information about albums having only content data that has never been transferred to the external apparatus and, upon a selection of one of the albums in response to the information about the albums, to transfer the content data of the one of the albums to the external apparatus.

41. (Previously Presented) The computer-readable medium according to claim 40, wherein the instructions further cause the processing unit to cause the display device to display the information about the albums based on the transfer log.

42. (Previously Presented) The computer-readable medium according to claim 32, wherein the instructions further cause the processing unit to acquire the transfer log from the external apparatus.

43. (Canceled)

44. (Previously Presented) The computer-readable medium according to claim 32, wherein the certain content data is defined by a song.

45. (Previously Presented) The computer-readable medium according to claim 32, wherein the processing unit transfers the certain content data to the external apparatus based on a determination whether the certain content data has previously been transferred to the external apparatus.

46. (Previously Presented) The computer-readable medium according to claim 45, wherein the processing unit transfers the certain content data to the external apparatus when the determination indicates that the certain content data has not previously been transferred to the external apparatus.
